

CLK

Sector Focus: Call Center

CLK is a Management Services company based in Overland Park, Kansas. When the company's growth necessitated the creation of a new call center, CLK decided that its new workplace should be stylish and modern. In addition, CLK stipulated that its office furnishings should allow natural light to filter throughout the space. CLK worked with architectural firm clockwork and Knoll dealer Spaces to select the AutoStrada™ office system, providing CLK with the desired level of openness and aesthetic beauty. In addition, AutoStrada delivers superior functional capabilities for the efficient distribution of power and data.

AutoStrada features four unique planning models that integrate high-performance capabilities with modern detail. AS-1 spine-based planning, cover, distributes power and data along a center channel. Workstations positioned along the service wall, left, feature transparent Upstart® privacy screens, which foster a sense of privacy while allowing the passage of light, Calibre® storage with 3/10/10 pedestal drawers, and environmentally friendly Life® chairs. AutoStrada AS-4 wall-based planning, above right, creates distinctive private offices. Finally, CLK's dining area, below right, features Gigi® stacking chairs and barstools by KnollStudio®.
